

**FOR CREATING LEADED
WINDOW LAYOUTS**

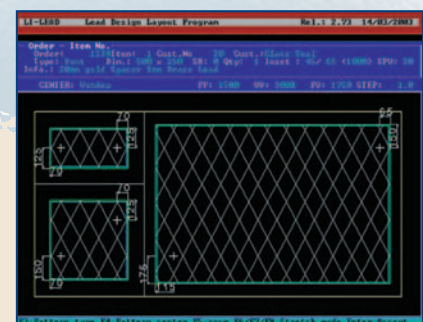

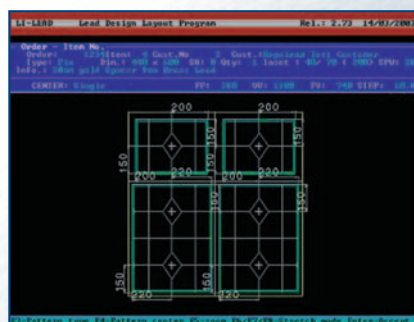

RegaLead have teamed up with LiseC Software, the world's largest suppliers of machinery and software to the glass industry, to bring GPS.lead to the UK insulated glass market.

GPS.lead allows easy Graphical design of lead styles to run through complete multipart windows or even a whole house elevation for most designs including Rectangles, Diamonds, Queen Anne and Queen Caroline. The package allows prints in A4 format for customer approval and then A0 (Full size) allowing the glass to be laid directly onto the print out for the lead applicator to follow. A full history of orders already processed can be searched and selected for easy reprint.

ADVANTAGES OF USING THE GPS LEAD PACKAGE

GPS.lead, unlike most other lead layout packages, is capable of doing all the major leading styles used:

- Diamonds
- Rectangles
- Queen Anne
- Queen Caroline
- Hanover
- Windsor
- Stuart
- Jacobean
- Gothic

Designs can be laid out quickly and easily to suit all the customers requirements and to make the design as aesthetically pleasing as possible. Many tools are in the software to achieve this such as stretch mode, allowing the designs to be manipulated to suit the exact requirements of the window.

A4 layouts can be printed and sent to customers, allowing approval before any lead is applied to the glass. This is particularly useful where complex or difficult designs.

A0 full size plots can be achieved very easily, allowing the lead applicator to just follow the printout, therefore orders are completed quickly and efficiently.

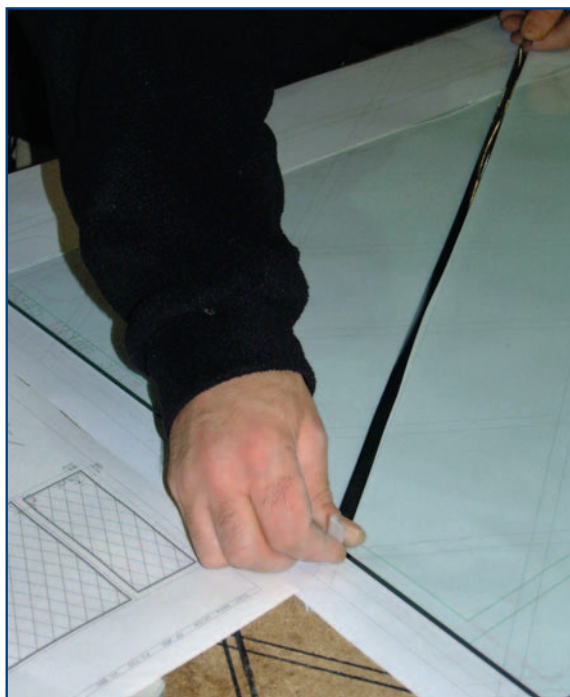

A complete history is held of all the work completed in GPS.lead is available to reprint at any time. Access is easy with many search criteria available allowing remakes to be reproduced without the problem of looking up the job or even going to site to get a rubbing of the broken or failed unit.

GPS.lead is multi platform this means Dos 6.2, Microsoft Windows 95, 98, 2000 & NT are all supported.

Window breaks (vent to vent & fix to fix) held per customer. Manual layout can also be used for window / door combinations.

Lining up the lead designs is easy with GPS.lead no matter how complex the design or window layout. All lead styles can be centralised, and adjusted quickly and easily using stretch mode.

Queen Anne and more complex designs, which combine diamonds and rectangles, can be lined up, using a wide choice of modes including whole windows layout, main unit, single, or using X and Y axis.

TESTIMONIALS

"without GPS.lead we would certainly not be able to cope with the volume of leaded units we currently have going through our plant"

Uniglaze 2, Norwich

"GPS.lead is a simple to use, yet powerful package that revolutionised our lead shop"

Custom Glass, Liverpool

"GPS.lead has greatly improved productivity in our lead department"

Regency Glass, Leigh

A demonstration CD showing all the benefits of GPS.lead is available free of charge from RegaLead.

GPS.lead can be ordered from Regalead and will be installed and invoiced by Lisec Software.
